Red Clover- \$30.00/half acre

Tasty and nutritious wildlife feed that stays green into the winter providing a late season feed source. Plant April – May in moderate to well drained soils with a pH of 6.5-7.5. Germinates in 7-10 days and will grow 18”-30” tall at maturity. Plant 5lbs per ½ acre.

White Clover- \$40.00/half acre

Puts out large leaves and also stays green long into the winter. Provides a good feed source for deer, turkey, partridge and grouse. Can be planted February – April or August – September in a wide range of soil types with a pH of 5.5-7.0. Will germinate in 7-10 days and grow 3”-24” tall and stands will last 2-10 years. Plant 2.5lbs per ½ acre.

Radish- \$30.00/half acre

Late flowering Daikon radish that produce large leafy tops and deep bulbs for wildlife to forage on in the late fall. Grows well in a wide range of soil types, plant early August to September in soils with a pH of 6.0-7.0. Will germinate in 4-6 days and reach 2’-3’ tall at maturity. Mixes well with small grains and grasses. Plant 3.5lbs per ½ acre.

Purple Top Turnip- \$30.00/half acre

A high quality high yielding feed source for summer or fall that will stay green long into the winter as well. Plant March – April or in August in a wide range of soils types with a pH of 5.5-7.0. Germinates in 5-7 days and can grow 2’-3’ at maturity. Also mixes well with small grains. Plant 2.5lbs per ½ acre.

Dwarf Essex Rape- \$6.00/half acre

A large leaf, high quality forage type plant that provides an excellent feed source for deer, turkeys and rabbits long into the winter. Plant in August in a variety of soil types with a soil pH of 5.5-7.0. Will germinate in 5-7 days and can grow 3’-4’ high at maturity. Plant 2.5lbs per ½ acre.

Forage Sorghum- \$12.00/half acre

An annual grass type plant with a high sugar, juicy stalk. Can grow 5’-8’ tall providing excellent cover. Capable of growing in a wide range of soil types with a pH of 6.0-7.0, planted May-July. Plant 5lbs per ½ acre.

Grain Sorghum- \$10.00/half acre

An annual grass type plant that grows a grain head and produces a grain with a feed value similar to corn but only growing 3’-4’ tall. The grain becomes more palatable throughout the fall. Also grows in a wide range of soil types with a pH of 6.0-6.5. Plant May-August at 5lbs per ½ acre.

Sorghum Mix- \$15.00/half acre

An excellent mix of short grain type sorghums and tall forage type sorghums. Provides excellent cover and the grain is a good source of feed for pheasant, quail, and turkey. Grows in a wide range of soil types with a pH of 6.0-7.0 and very drought resistant. Growth varies between 3’-8’ tall at maturity. Plant 5lbs per ½ acre May- August.

Frozen Forage Annual Brassica Mix- \$40.00/half acre

Quick-growing annual forage that produces lots of leafy tonnage. Deer love it when it freezes. Ingredients include Groundhog radish, purple top turnip, Dwarf Essex rape, Appin turnip, and Endure chicory. Plant late July-mid September.

Midwestern T-N-T (Tine & Turkey) Perennial Forage/Grazing Mix- \$35.00/half acre

The best perennial mix for your best soils. With a good pH this mix will produce high tonnage, high quality forage for many years for multiple species. Ingredients include Enduro Elite alfalfa, Advantage ladino clover, Kopu II white clover, Berseem clover, Gallant red clover. Plant March-April or August-September.
